PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience designing and building scalable backend systems using Node.js, TypeScript, JavaScript, SQL, MongoDB, Redis and AWS. Experienced in architecting multi-tenant SaaS applications, developing distributed backend services, optimizing database performance, designing asynchronous processing pipelines, and building real-time applications. Strong foundation in Data Structures & Algorithms, System Design, Distributed Systems, Database Design, Scalability, Performance Optimization and end-to-end ownership of production software.

WORK EXPERIENCES

Software Engineer | Full-time — Feb 2024 - Present
NexusIQ Solutions — *On-site · Hyderabad, Telangana, India*

- Designed and implemented a **multi-tenant backend architecture** serving multiple organizations with secure tenant isolation and configurable authorization.
- Architected **RESTful backend services** using Node.js and TypeScript, supporting concurrent exam workflows with role-based access control across **40+ permission types**.
- Optimized MongoDB queries through indexing, aggregation pipeline improvements, and schema redesign, **reducing API latency** for high-volume operations.
- Built asynchronous processing pipelines for AI-assisted question generation and evaluation, **improving content generation efficiency by over 70%**.
- Integrated AWS S3 storage for scalable media management with secure upload/download workflows.
- Owned features through architecture, implementation, deployment, production support, and performance optimization.

Technologies / Skills Used : *Node.js, TypeScript, MongoDB, AWS S3, WebSockets, Microservices, Next.js, Framer-motion, SSE, Webhooks, Tailwind CSS, Express, Redis, Rest APIs, Docker, Queuing Systems, BullMQ*

Junior Software Engineer | Full-time — Nov 2022 - Apr 2023
Upgrad Insofe — *On-site · Hyderabad, Telangana, India*

- Built Angular components and Node.js APIs for analytics dashboards, **reducing page load time by 30%** with lazy loading.
- Collaborated with data engineering teams to integrate machine learning models into production APIs.

Technologies / Skills Used : *Angular, Node.js, Bootstrap, Express, MongoDB*

PROJECTS

Production-grade Email Queue Platform | Github
Architect

- Built an SVM-based diabetes predictor and a handwritten digit recognizer, achieving **98% accuracy on MNIST** using Pandas, Scikit-learn, and TensorFlow.
- Improved model reliability through data preprocessing, feature engineering, and hyperparameter tuning across classification and digit recognition tasks.

Technologies / Tools Used : *Node.js, TypeScript, BullMQ, Redis, Docker*

Distributed Rate Limiting Service
Developer

- Designed a centralized distributed rate limiting service using Redis, supporting **1,000+ requests/sec** with shared rate-limit state across multiple application instances.
- Implemented Token Bucket and Sliding Window algorithms using Redis atomic operations and Lua scripts to eliminate race conditions under concurrent requests.
- Built reusable middleware with configurable throttling policies, supporting **100+ concurrent clients** and per-client rate limits.
- Benchmarked both algorithms for throughput, p95 latency, and memory utilization under simulated concurrent workloads.

Technologies / Tools Used : *Node.js, TypeScript, Redis, Lua, Express*

TinyURL - Distributed URL Shortening Service
Developer

- Designed a scalable URL shortening service targeting **1,000+ redirects/sec**, featuring unique short-link generation, analytics, and configurable expiration policies.
- Optimized redirect latency using Redis caching and MongoDB, achieving **sub-50 ms p95 response times** under load testing.
- Developed MongoDB indexes for read-heavy workloads, enhancing short-link lookup efficiency to support **high-volume redirect traffic**.
- Implemented duplicate detection, click tracking, and automated link expiration to improve data consistency and lifecycle management.
- Documented system architecture, covering caching strategies, load balancing, horizontal scalability, and fault tolerance.

Technologies / Tools Used : *Node.js, TypeScript, MongoDB, Redis, Docker, AWS*

SKILLS

Databases :	MongoDB, MySQL, Redis
Frameworks & Libraries :	Node.js, Express.js, React.js, Angular
Programming Languages :	Java, TypeScript, JavaScript, SQL, Python, programming
Soft Skills :	Data Structures & Algorithms, System Design, Distributed Systems, Database Design, Caching, Concurrency, Event-Driven Architecture, RBAC, Design Patterns
Tools & Platforms :	AWS S3, Docker, Git, Postman, Webpack, CI/CD, CI/CD tools, Kubernetes, AWS EKS, GCP GKE, Azure AKS

EDUCATIONS

Year	Degree	Institute	CGPA
2019 - 2023	Bachelor of Technology in Computer Science & Engineering	Geethanjali College of Engineering and Technology	7.8/10

CERTIFICATIONS

- Full Stack Development (React, Node.js) - NxtWave
- Java Full Stack - Wipro TalentNext
- Machine Learning using Python - Verzeo

- Git, SQL, Command Line & Responsive Design - NxtWave
